## Contents

<b>1</b>	<b>“Supernorm” figures</b>	<b>2</b>
1.1	Daily normal of hourly temperatures . . . . .	2
1.2	Degree day based PQL supernorm . . . . .	3
1.3	MED-FOES PQL based supernorm . . . . .	4
<b>2</b>	<b>Difference in PQL at nearby sites (LA basin example)</b>	<b>5</b>
<b>3</b>	<b>Historical quarantines</b>	<b>6</b>

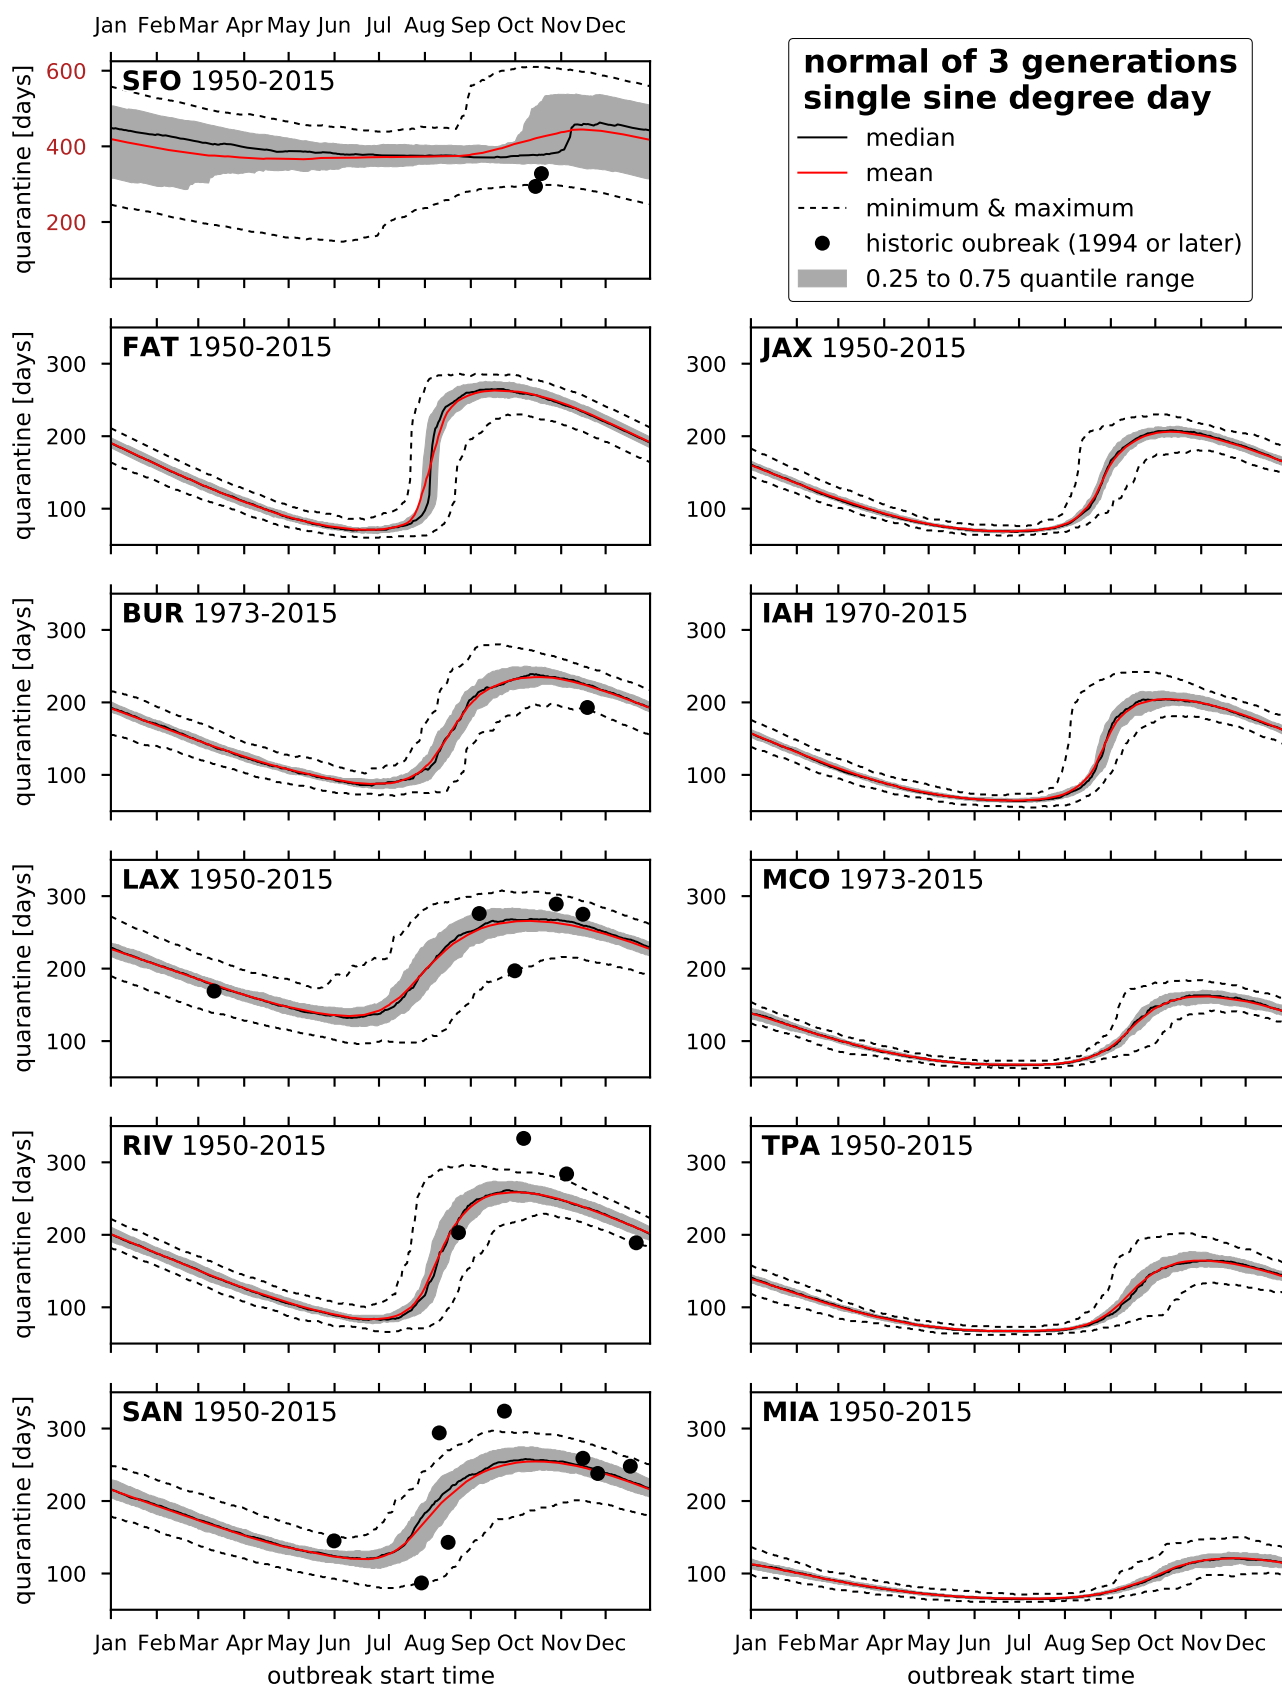

## “Supernorm” figures

### Daily normal of hourly temperatures

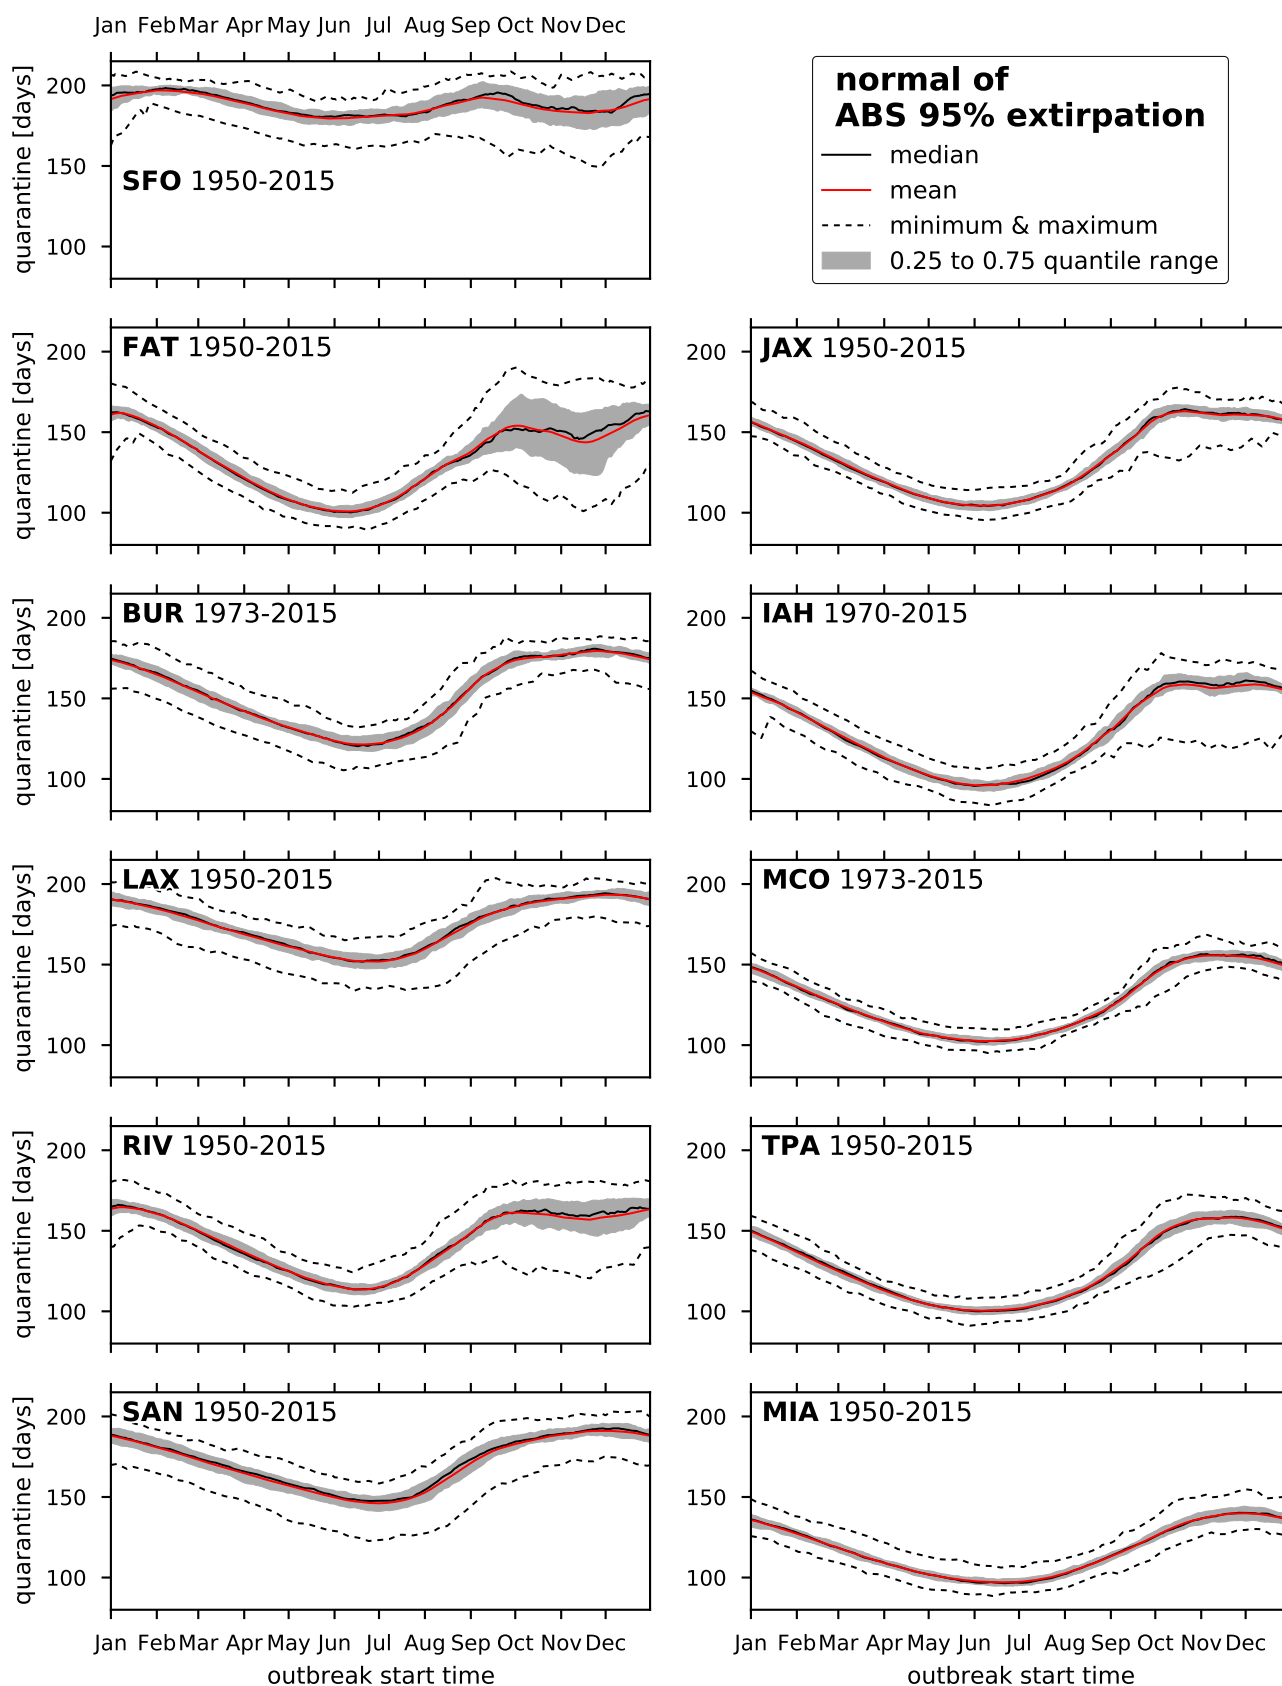

**Figure 1.** Hourly temperature data aggregated by day of year.

## Degree day based PQL supernorm

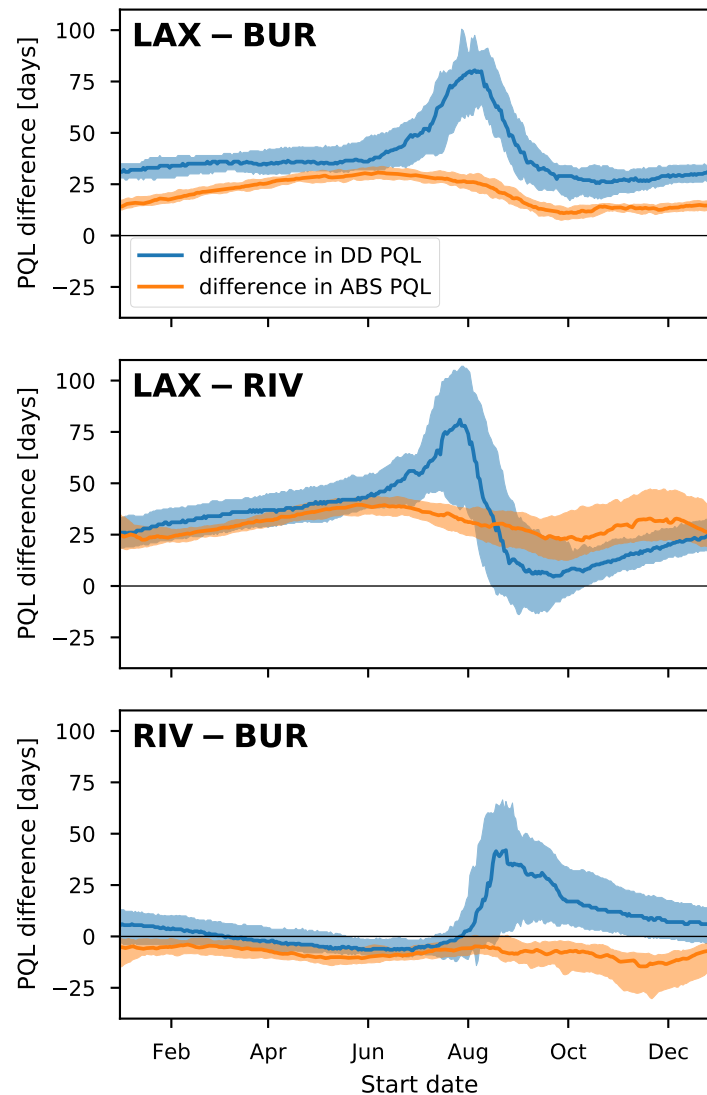

**Figure 2.** Single sine degree day based predicted quarantine lengths aggregated by day of year.

## MED-FOES PQL based supernorm

**Figure 3.** MED-FOES based predicted quarantine lengths aggregated by day of year.

## Difference in PQL at nearby sites (LA basin example)

**Figure 4.** The difference in PQL values for the same start date (including year) between sites in the LA basin. For each date over the range of available data (1973 through 2015 for LAX-BUR and RIV-BUR, 1950 through 2015 for LAX-RIV), PQL values for each site are computed and the differences taken. The resulting differences are then aggregated by day-of-year. Lines show the median while the shaded region is the 25% to 75% quantile range for each day-of-year aggregation of differences.

# Historical quarantines

**Table 1. Historical quarantines in California.**

Year	City	County	Site	Start Date	End Date	Area [mi <sup>2</sup> ]	duration [days]	day-of-year	DD PQL [days]	mean normal DD PQL	ABS PQL [days]	mean normal ABS PQL
1975-1976	Venice	Los Angeles	KLAX	1975-11-14	1976-08-02	100	262	2011-11-14	248	257	192	192
